

# International Symposium on Energy Resources and Sustainability in Russia

22<sup>nd</sup> October 2016, Kyoto, Japan

12:30 – 17:30

Organised by: The Japan Consortium for Area Studies (JCAS), the Slavic-Eurasian Research Centre, Hokkaido University (SRC), the Japanese Society for Comparative Economic Studies (JSCES) and the Graduate School of Advanced Leadership Studies, Kyoto University (Shishu-Kan)

## 【The Objectives of the Symposium】

Energy resources in Russia have a great impact on sustainability of its economic system domestically and on sustainability of our earth system internationally throughout energy trades and policy negotiations with other economies. Exploring their domestic and international aspects, this Symposium aims to provide more comprehensive understanding of energy resources in Russia. In this context, this Symposium is divided into three sessions as follows.

In the first session, we try to reveal energy resources in Russia, focusing on domestic affairs such as behavioural patterns of state-owned energy companies, historical and present situation relevant to energy and environmental resources in Russia. In the second session, our focus is put on energy resources in Russia in an international context, for instance, energy trades and policy negotiations in an international market. Finally, a roundtable ‘Energy Resources and Sustainability in Russia’ is organised with speakers to advance the topic and exchange our research results with a broad discussion. This Symposium also creates an opportunity to further raise the visibility of the potential ‘industry-academia-government’ cooperation on a broad spectrum of the thematic issues.
